

Technology Without Borders

The ISPE Foundation Technology Without Borders program aims to fill a critical gap in the availability of ISPE's guidance documents and the necessary training to adopt this guidance into practice in countries where socio-economic conditions or language barriers may otherwise limit access.

Case for Support

Sharing information and knowledge in the pharmaceutical industry is critical to the industry's success in bringing transformative medicines to patients worldwide. ISPE provides valuable content and a modern platform for global communications and professional development.

Companies in emerging economy markets often struggle to maintain established industry standards. It is crucial that their workforce managing and operating facilities & systems, and local regulatory authorities are equipped with the knowledge to ensure application of the industry's universal standards and best practices related to manufacturing processes, harmonization of regulations, and production quality. The ISPE Foundation's Technology Without

Borders program was created to expedite the process of available essential industry guidance documents and associated training to emerging economies, specifically regulatory authorities and organizations who would otherwise have limited or no access to the pharmaceutical industry's best practices and standards. In partnership with fellow philanthropically minded supporters, the ISPE Foundation provides funding to enable access to ISPE guidance documents and associated professional development/training to these target markets, and where necessary in local languages. Our mission supports the advancement of innovative technologies and provides solutions to global challenges in the development, manufacture, and supply of quality pharmaceutical products for the benefit of patients around the world.

Significant funding from industry partners in support of this program is critical to ensure organizations and local regulatory authorities from emerging economies are equipped with ISPE's book of knowledge. With your partnership we can further advance local pharmaceutical manufacturing capabilities and positively contribute to a diverse and capable workforce.
