

ISPE FOUNDATION Scholarships and Grants

The ISPE Foundation accelerates the availability of transformational medicines for all patient populations – fueling global health equity by fostering access to knowledge and nurturing diverse talent. The Scholarships and Grants Pillar provides financial support for university and college students to pursue academic degrees in STEM or related fields supporting the pharmaceutical industry.

Scholarships and Grants Pillar

The pillar provides globally diverse STEM students and emerging leaders with increased access to life-changing opportunities through a variety of programs.

Scholarships Program

The Scholarships Program seeks to improve access to education, particularly to those in underserved and underrepresented communities.

Professional Development Grants Program

The Professional Development Grants Program enables more students and emerging leaders to attend ISPE's conferences and trainings. Once there, they strengthen their knowledge and expertise, develop a professional network, and access exciting and stimulating career opportunities.

Without the financial support afforded through the grant program, 96 percent of grant recipients expressed that attending the conference would have been an unattainable dream.

Invest in the Workforce of the Future

We want to significantly grow the number of scholarships and grants offered to students and emerging leaders, infusing the pharmaceutical industry workforce with new and diverse talent. We cannot achieve this goal without your support.

Your charitable donation will expand access to students, emerging leaders, and individuals from underrepresented and underserved communities. Contributions also address one of the most urgent needs of our industry: the current shortage of skilled, diverse talent.

“To understand the value, you're bringing to the industry and how that translates into making life-changing medicines cheaper and more accessible to the patients that need them, it instills a sense of purpose and meaning in what you're doing. You feel equipped as a young professional.”

Eoin Hagerty

2023 ISPE Biotechnology Conference Grant Recipient
