

ISPE FOUNDATION

# ISPE Knowledge without Borders

The ISPE Foundation accelerates the availability of transformational medicines for all patient populations – fueling global health equity by fostering access to knowledge and nurturing diverse talent. By providing access to knowledge, the ISPE Foundation allows emerging economies to develop and implement solutions to local and global challenges.

## ISPE Knowledge without Borders Pillar

ISPE Knowledge without Borders enables a globally diverse workforce that can support the pharmaceutical industry both locally and internationally. Furthermore, our efforts are helping to support international regulatory harmonization and standardization.

## Translations Program

Translations remove language barriers that hinder access to knowledge and training courses. ISPE Guidance Documents, the gold standard for technical knowledge in the industry for students, emerging leaders, regulators, and manufacturers in emerging economies, are made available in native languages.

## Technology without Borders Program

Technology without Borders provides professional training courses and access to ISPE Guidance Documents. In 2023, the program was successfully piloted in Brazil, making translated, culturally relevant, and locally adapted ISPE resources available in the country for the first time. ISPE worked closely with both the ISPE Ibiza Affiliate and ANVISA to drive adoption for this program. The finalized translated courses have been entered into ISPE's Learning Management System for on-demand, online delivery, which expands our ability to provide these resources in Portuguese.

## Expanding Our Global Community

You will help accelerate global knowledge transfer by supporting ISPE Knowledge without Borders. This enables essential trainings and resources to be available in native languages.

Your charitable donation will allow emerging economies to become less reliant on external medicines, further enabling the ISPE Foundation's contribution to global health equity.

Together, we will build a more inclusive industry that best serves patients globally.

A global trend continues with revenue in the pharmaceutical industry shifting from North America and Europe. The market share of revenue in emerging markets has increased over time.\*

- 2005: <20%
- 2015: 35%
- 2022: 48%

Investing in emerging markets allows the industry to capitalize on continued growth opportunities to better serve patients.
